THE BLACK KNIGHT

*"A new standard in rich harmon
Surprisingly*

INNOVATION & VALUE

Innovative and unusual design ideas free the Black Knight from mediocrity. By working "smarter, not harder," and by ignoring many costly fads, the Black Knight delivers an incredible price/performance value.

UNCONDITIONAL STABILITY

One reason the Black Knight sounds so natural, so real, is that it operates entirely without negative feedback loops. As a result, it is unconditionally stable into all loads, and is much less prone to premature overload. We believe that this contributes to a "relaxed" sound and an absence of fatigue.

POWER AMPLIFIER

ic timbres and natural imaging.
affordable."

RICH AND OPEN

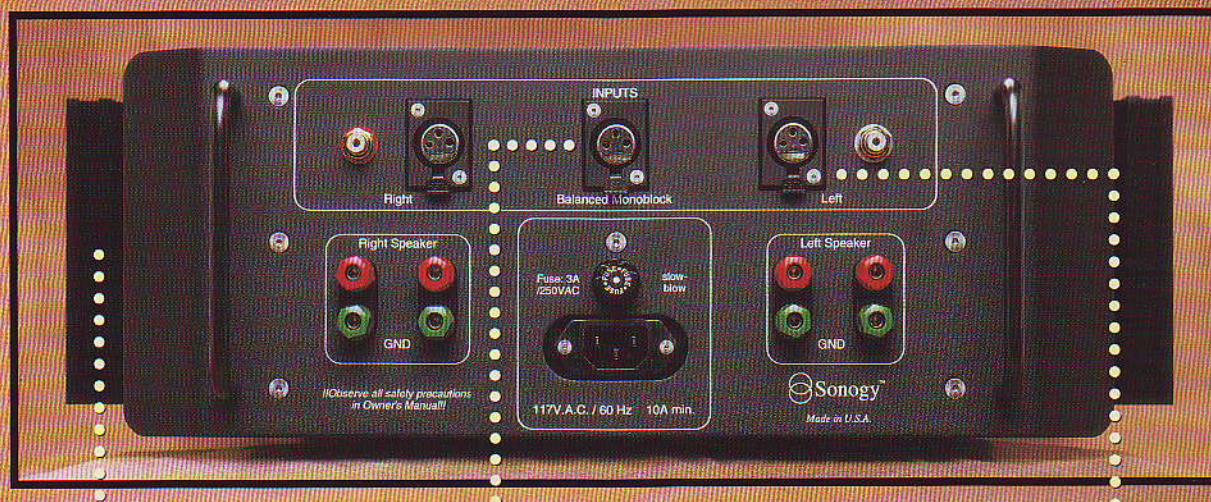

The Black Knight transcends solid state design to deliver the natural timbres and spacious imaging generally associated with the costliest tube amplifiers — along with all the qualities of a powerful solid state amp.

QUALITY CRAFTSMANSHIP

Like all Sonogy products, the Black Knight is crafted using great-sounding and high performance components; Full Spectrum™ audio cables, WIMA™ polypropylene capacitors, custom transformers and 1%, low-noise, metal film resistors.

Massive Heat Sink

These large heat sinks are required by the Black Knight's power and high bias (degree of class-A operation). The amplifier dissipates ~175 watts, even at idle.

Balanced Monoblock Input

Black Knights can also be used in pairs as 500-watt fully balanced monoblocks. Simply drive this center XLR jack with a balanced input signal, and experience effortless dynamics and true differential operation. In this configuration, a Sonogy system is fully balanced from your pre-amp to your speakers – a very rare luxury.

True Balanced Circuitry

The Black Knight's input circuitry is true balanced circuitry. Unlike many other products, we do not use 'hidden circuitry' to convert a signal from balanced back to unbalanced. Rather, ours are pure, honest, direct connections to a real differential input – and thus avoid the added distortion common to lesser designs.

KEY SPECIFICATIONS

Stereo Power	175 W/ch (8Ω)	Feedback	0 dB (No Loops)
Monoblock Power	500 Watts (8Ω)	Power Dissipation	175 Watts at Idle
Class of Operation	High Bias A/AB	Dimensions (h:w:d)	6.25":18":21"
Gain Stage Operation	Pure Class A	Shipping Weight	50lbs/23kg
